

Codebook for file: igt_flex_coding.xlsx

Bibliographical Information	
Variable	Description
id	numerical identifier for each publication
authors	authors of publication [last name] et al.
year	year of publication
title	title of publication
journal	journal in which paper was published
vol	volume of journal
issue	issue of volume
pages	pages of volume/issue
doi	Digital Object Identifier
Basic Information About Study	
Variable	Description
study_n	number of IGT studies in the publication
order	order number of study as reported in the publication -99 = not applicable
sample	basic information about study sample -77 = indeterminable
size	number of participants in the final sample -77 = indeterminable
setting	study setting 0 = laboratory 1 = online experiment 2 = other -77 = indeterminable
IGT Design	
Variable	Description
cited	cited IGT version e.g., Bechara 1994, Bechara 2007 -77 = indeterminable -99 = not applicable
format	IGT format 0 = computerized 1 = physical cards -77 = indeterminable

IGT Design	
Variable	Description
pay	form of reward during the task e.g., play money, points -77 = indeterminable
start	amount of starting capital -77 = indeterminable
goal	goal as in the instructions for the participants -77 = indeterminable
instruct	description of other relevant instructions e.g., the participants are told that there are disadvantageous decks -77 = indeterminable -99 = not applicable
feedback	description of feedback given during the task e.g., win/loss after each choice, stimuli on cards
incent	incentives 0 = independent from task success 1 = dependent from task success -77 = indeterminable -99 = not applicable
trials	total number of trials -77 = indeterminable
exercise	number of exercise trials -77 = indeterminable
time	time limit for a trial [ms] -77 = indeterminable -99 = not applicable
Deck Properties	
Variable	Description
decks	number of decks in total -77 = indeterminable -99 = not applicable
adv_n	number of advantageous decks -77 = indeterminable -99 = not applicable
disadv_n	number of disadvantageous decks -77 = indeterminable -99 = not applicable
cards_n	number of cards per deck -77 = indeterminable -99 = not applicable

Deck Properties	
Variable	Description
reward_adv	reward for choosing cards of advantageous decks -55 = variable -77 = indeterminable -99 = not applicable
reward_disadv	reward for choosing cards of disadvantageous decks -55 = variable -77 = indeterminable -99 = not applicable
gain1	net gain of advantageous deck 1 -55 = variable -77 = indeterminable -99 = not applicable
gain2	net gain of advantageous deck 2 -55 = variable -77 = indeterminable -99 = not applicable
loss1	net loss of disadvantageous deck 1 -55 = variable -77 = indeterminable -99 = not applicable
loss2	net loss of disadvantageous deck 2 -55 = variable -77 = indeterminable -99 = not applicable
gain_int1	interval for net gain of advantageous deck 1 [Number of trials] -77 = indeterminable -99 = not applicable
gain_int2	interval for net gain of advantageous deck 2 [Number of trials] -77 = indeterminable -99 = not applicable
loss_int1	interval for net loss of disadvantageous deck 1 [Number of trials] -77 = indeterminable -99 = not applicable
loss_int2	interval for net loss of disadvantageous deck 2 [Number of trials] -77 = indeterminable -99 = not applicable
freq_adv1	loss frequency of advantageous deck 1 [Number of trials] -77 = indeterminable -99 = not applicable
freq_adv2	loss frequency of advantageous deck 2 [Number of trials] -77 = indeterminable -99 = not applicable

Deck Properties	
Variable	Description
freq_disadv1	loss frequency of disadvantageous deck 1 [number of trials] -77 = indeterminable -99 = not applicable
freq_disadv2	loss frequency of disadvantageous deck 2 [number of trials] -77 = indeterminable -99 = not applicable
other	other relevant information regarding the properties -99 = not applicable
Analytic Procedures	
Variable	Description
blocks	total number of trial blocks if the task was divided into blocks for calculation -77 = indeterminable -99 = not applicable
trials_block	number of trials per block -77 = indeterminable -99 = not applicable
calc_n	number of strategies for calculating performance scores -77 = indeterminable -99 = not applicable
calc_desc	description of strategies for calculating performance scores for this purpose, the strategies are numbered and described in file: calc_strat.xlsx
Notes	
Variable	Description
notes	additional relevant information about the study -99 = not applicable
